IQAC Co-coordinator

Prof. R.B. Chopade
IQAC Coordinator

Dr.S.D. Patil
Principal

Key Differences Between Website and Blog

- The website is more general term as compared to a blog, which is more specifically designed. In other words, all blogs are considered to be a website, but not all websites are considered to be blog.
- The basic unit in a website is content, whereas, in a blog, it is a post.
- In a blog (or informational websites), the contents are placed according to some chronological order. As against, on a website, there is no specific arrangement of the contents.
- The commenting section is mostly provided in the blogs, while this is not necessary with the websites as the blogs are more interactive than a website.
- The homepage could probably be present within a blog but on the website, the homepage should be included.
